

## TRACK-TBI LONG Launches

May 24, 2019

# TRACK-TBI LONG

Transforming Research and Clinical Knowledge  
in Traumatic Brain Injury Longitudinal

We are pleased to announce the launch of TRACK-TBI Longitudinal (TRACK-TBI LONG) in May 2019, funded through a competitive grant from the National Football League Scientific Advisory Board. TRACK-TBI LONG will further advance our understanding of TBI's natural history by extending follow-up of the original TRACK-TBI cohort by an additional year. This follow-up effort to the TRACK-TBI study aims to collect longer term data on the outcomes of those original TRACK-TBI participants who experienced a brain injury. To that end, we will be re-contacting all TRACK-TBI participants (enrolled from February 2014-August 2018) to gather additional data on participants who are **two or more years out from their date of injury**. We plan to follow up with at least one, and up to three ~2-hour annual phone calls with the potential to bring participants back for in-person research visits at a future date. The phone call will include surveys and questions that are very similar to what is asked during the current TRACK-TBI 3 month phone call with some small modifications.
